

Wireless Vibration and Temperature Monitoring

Vibration monitoring and predictive maintenance made easy with a full solution from Banner

- Detect problems early
- Prevent unexpected downtime
- Plan maintenance efficiently

Vibration Monitoring for Predictive Maintenance

Why Monitor Vibration?

- Reduce downtime eliminate unexpected failures
- Detect problems early avoid additional damage to machines
- Efficiently manage replacement parts
- Track machine faults and warranty

How Does It Work?

- Banner vibration sensors measure several vibration characteristics and wirelessly sends the data to the DXM controller
- The DXM controller collects the data and can be programed to automatically establish baselines and set warning and alarm thresholds
- The Vibration Solutions Kit (see page 6) is completely pre-programmed and displays data locally on the HMI or can send data to the network or the cloud
- Banner's wireless vibration monitoring system easily integrates with legacy machines

Machine Learning

- Banner's machine learning algorithm automatically establishes a machines baseline using the first 300 data samples
- It then sets warning and alarm thresholds for both acute and chronic conditions for each machine

What to Monitor

Vibration Characteristics:

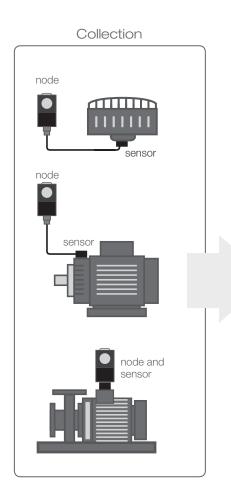

- RMS velocity = general machine health
- High frequency RMS acceleration = early bearing wear

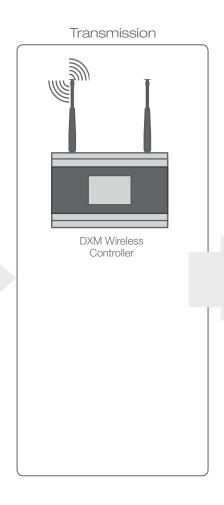

Common Equipment:

Motors Compressors
Pumps Gear boxes
Exhaust fans Spindles

HVAC Any rotating equipment

End-to-End Vibration Monitoring Solution

IIoT Condition Monitoring

All of the critical components of condition monitoring are provided by Banner Engineering and designed to work seamlessly together. Solution Guides are available that make it easy to setup a complete system in days, not weeks or months. Banner Connected Data Solutions (CDS) provides a codeless environment and easily interfaces with the DXM controller to receive vibration data from Banner vibration sensors via wireless nodes. The DXM controller, using a machine learning algorithm, establishes vibration baselines and automatically sets warning and alarm thresholds.

Easy Installation of Wireless Remote Monitoring

Q45VA

- All-in-one vibration and temperature sensor/node
- Uses a 1-wire serial interface
- Easy-to-deploy

OR

QM30VT1

- 1-wire serial interface
- One vibration sensor to one node with 1-wire serial interface

Select One Wireless Node

OR

QM30VT2

- Functions as a modbus slave device via RS-485
- Can be connected via a wireless or wired modbus network
- Aluminum and stainless steel housings available

Select Modbus Radio Select Q45VA

Simple Monitoring

Q45VTP

- Easy-to-use without software
- Two AA lithium batteries
- DIP switch configurable for vibration characteristics and sample intervals

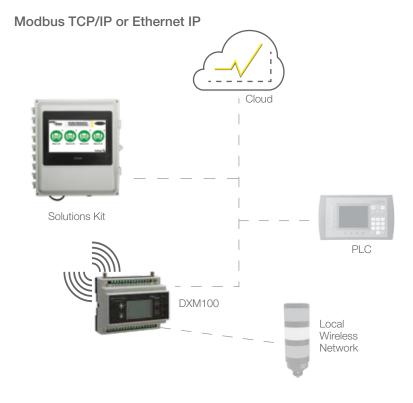

Monitor Many Sensors Over Long Distances

Performance Series Nodes

- Expandable up to 47 Nodes
- Cover large areas with 900 MHz, 1 Watt power
- D-cell lithium battery or 10 to 30 V dc
- Models available that also monitor current

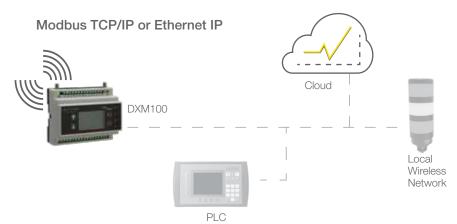

Modbus Slave

MultiHop Modbus Slave with RS-485

- Connect to any modbus network
- Expanable up to 100 slave radios
- Use repeaters to extend range and circumvent obstacles
- Modbus host controller required

Select One

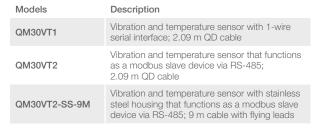

QM30VT Series Sensor

QM30VT1

- Vibration & temperature sensor
- One sensor per node
- Uses a 1-wire serial interface
- Dual axis vibration sensing
- Sealed aluminum housing

OM30VT2

- Vibration & temperature sensor
- Functions as a Modbus slave device via RS-485
- Dual axis vibration sensing
- Sealed aluminum and stainless steel housings
- Can connect to a wireless or wired Modbus network

Q45VA Sensor/Node

- Vibration and temperature sensor and node in one compact package
- Uses a 1-wire serial interface
- Easy-to-order
- Easy-to-deploy
- DIP switch configurable for vibration characteristics and sample intervals
- Dual-axis vibration sensing

Vibration Solutions Kit

- Monitor vibration and temp on up to 40 assets
- Pre-programmed DXM700 and HMI for easy setup no programming required
- Simply bind nodes using the HMI screen, install sensors (sold separately), and start collecting data
- Machine learning algorithm automatically sets baselines and thresholds
- Visualize data and alarms on the HMI, or send it to the network or the cloud
- Use Virtual Network Computing (VNC) to emulate the HMI screen on computers and mobile devices

Models	Description
SOLUTIONSKIT2-VIBE	2.4 GHz; Enclosure, DXM700
SOLUTIONSKIT2-VIBE-Q	2.4 GHz; Enclosure, DXM700, one DX80N9Q45VT Node and one QM30VT1 Sensor
SOLUTIONSKIT2-VIBEMETRIC	2.4 GHz; Enclosure, DXM700 (metric)
SOLUTIONSKIT9-VIBE	900 MHz; Enclosure, DXM700
SOLUTIONSKIT9-VIBE-Q	900 MHz; Enclosure, DXM700, one DX80N9Q45VT Node and one QM30VT1 Sensor
SOLUTIONSKIT9-VIBEMETRIC	900 MHz; Enclosure, DXM700 (metric)

Connected Data Solutions (CDS)

Banner CDS is a cloud-based software platform that allows users to access, store, protect, and export critical data collected by Banner's wired and wireless sensors.

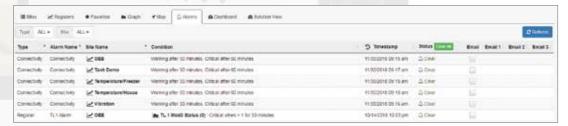

Device geo information with health status

Custom graphing with alert baselines

Customizable and codeless dashboards

Condition-based alerts and notifications (e-mail, SMS)

Long term data storage and offloading via FTP

Nodes

For use with VT1 Sensors

	1 Of use Will VII Sellsors
