

Analog Signal Isolator 2-channel IM35-22EX-HI/24VDC

The 2-channel IM35-22EX-HI/24VDC signal isolator is designed to transmit the normalized current signal galvanically isolated 1:1 from the non-Ex area to the Ex-area. In addition to the analog signal, also digital HART® communication signals can be transmitted bidirectionally.

Typical applications are for example, the control of I/P converters (at control valves for example) or indicators in the Ex-area.

The actuators are connected to the output terminals 1/2 and 4/5. Handheld terminals [HHT] can be connected to the output and input terminals 7/10 and 8/9.

In addition, the removable terminal blocks are equipped with 2 mm test sockets for signal control.

- Intelligent actuators supplied via HART communication interface
- Input circuits: 0/4...20 mA
- Output circuits: 0/4...20 mA, intrinsically safe
