**Efficiency in Automation** - A reflection of our company philosophy

As an experienced specialist in automation technology, with solutions for flexible and high flexing cables, cable assemblies, interfaces, current control and cabinet wiring, we have had a focus on efficiency for many years.

LÜTZE defines Efficiency in Automation field as the use of sustainable products and solutions to further increase the performance of our products in our customers applications.

We realise this by using components for highly efficient control systems, products with above average life cycles and raising energy efficiency in control cabinets by means of the LSC wiring system.

Efficiency in Automation reflects our efforts in striving for efficient working relationships with our customers: in a medium sized family owned company we have short communication channels and a high level of manufacturing competence.

The value of a product or a solution from LÜTZE is determined by its sustainable qualities. Every innovation will only be successful in the future if it has a long term positive effect. Therefore, we provide long lasting as well as highly efficient components.

Thus LÜTZE creates value through efficiency. LÜTZE provides answers and demonstrates how to handle resources responsibly, with our environment and our future in mind. **LÜTZE - Efficiency in Automation**

For more information on our solutions, please visit [www.luetze.com](http://www.luetze.com) or [www.lutze.com](http://www.lutze.com)

# Business Management: Sustainable and forward-looking

## The future is blue

Sustainable enterprise means thinking and planning ahead, understanding and embedding the belief that long lasting success is more important than short-term profit maximisation.

This is an attitude that has existed within LÜTZE for quite some time. Economic and environmental responsibilities complement each other well and are reflected in the sustainable management and

product policy - and from now in the **SkyBLUE** campaign.

We manufacture our products in a resourceful and energy-conscious manner. We use long lasting, environmentally-friendly materials. And our products, in turn, help our customers save energy and resources. Good for everyone: for us, for the environment, for our customers a win-win-win situation.

# ard-looking

*„The competitiveness of our industry and of its suppliers depends quite substantially on how we succeed in developing practical results. The results that we produce together today, are our competitive advantages in the future.“*

*Udo LÜTZE,  
Member of the Executive Committee of  
the Green Carbody Innovation Alliance*

## Goods with real value

The value of a product or a solution from LÜTZE is determined by its sustainable qualities as well. Every innovation is only as successful in the future if it has a long-term positive effect. Therefore, we provide long lasting as well as highly efficient components.

We are incorporating the necessary knowledge and manufacturing competence in numerous joint projects with the objective of improving energy efficiency and

sustainable technologies and industries. Thus, LÜTZE provides answers and demonstrates how to handle resources responsibly, with our environment and our future in mind.

# Power Supplies · Basics

A power supply has a decisive influence on the availability and operational reliability of electrical systems.

Consequently, the selection of the right power supply should be just as critically and carefully undertaken as that of the other system components.

## 1. General structure

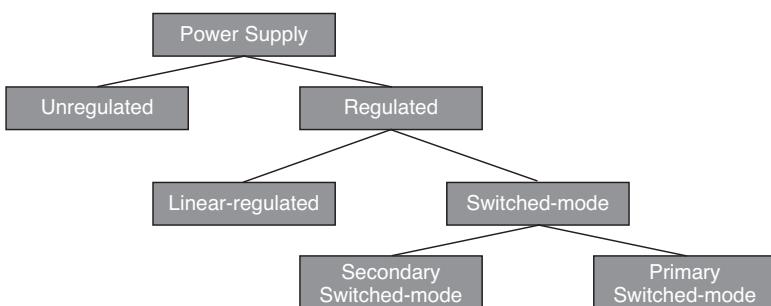

Regardless of the technology employed, power supplies are devices with an input side and an isolated output side.

In technology terms, however, there are two different basic designs:

Unregulated and regulated.

The regulated variants are subdivided into linear-regulated and switched-mode power supplies.

The key criteria in selection of a power supply are:

### Input side:

Input voltage  
Primary grounding  
Current consumption  
Inrush current  
Input fuse  
Frequency  
DC supply  
Power failure buffering  
Power Factor Correction (PFC)

### Output side:

Output voltage  
Secondary grounding  
Short-circuit current  
Residual ripple  
Output characteristics  
Output current

## 2. Safety

The safety of people and equipment is always the priority. Accordingly, power supplies must comply with unified regulations and standards.

### 2.1 Galvanic isolation

Galvanic isolation generally refers to the isolation between two conductive objects, such as metal plates or electrical circuits. In the case of electrical circuits it is consequently not possible for charge carriers to flow from one circuit into another, as there is no electrically conductive connection between the two.

In the case of power supplies this means that there is no electrical connection between the input and output sides.

### 2.2 Insulation

The different kinds of insulation are specified in IEC/EN 60950:

- Functional insulation  
Insulation needed for the correct operation of the equipment.

### • Basic insulation

Insulation to provide basic protection against hazardous structure-borne currents.

### • Supplementary insulation

Protection against hazardous structure-borne currents if the basic insulation fails.

### • Double insulation

Insulation comprising both basic insulation and supplementary insulation.

### • Reinforced insulation

Unified insulation system. Provides equivalent protection to double insulation.

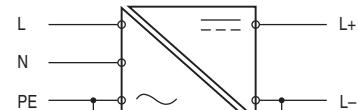

## 2.3 Safe isolation

Safe isolation according to EN 50178 is required for all interfaces between different electrical circuits, such as between a SELV circuit and a mains circuit.

Safe isolation means that no current flow can occur from one electrical circuit to another. This isolation has to be implemented either by double or reinforced insulation or by means of protective shielding.

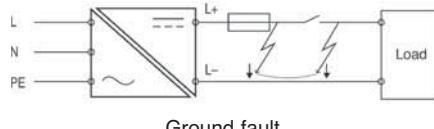

## 2.4 Secondary grounding

In case of secondary grounding, the output side of the power supply is connected to protective earth (PE) in order to prevent dangerous ground faults.

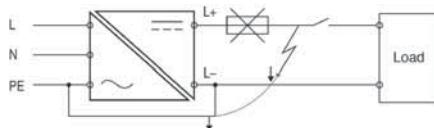

Secondary grounding

A ground fault occurs if a current-carrying line has contact to earth. In the worst case, two simultaneous ground faults can lead to a bridging of switches and thus can start equipment accidentally.

Ground fault

If secondary grounding is used, the occurrence of such a ground fault leads to a so-called short circuit to earth which causes the fuses in the secondary circuit to trip.

# Power Supplies · Basics

## 2.5 SELV

SELV according to IEC/EN 60950 is a safety extra low voltage which thanks to its low level and insulation offers better protection against electric shock than higher-tension circuits.

Power supplies generating SELV, for example, must be designed to prevent shorting between the primary and secondary windings and their connections. The windings can only be overlaid if double or reinforced insulation is placed between them. This isolation is termed galvanic isolation. Grounding of the secondary side is not required but permitted.

The peak value must not exceed 42.4 V in case of AC voltages and 60 V in case of DC voltages.

## 2.6 PELV

PELV according to IEC/EN 60950 is a protective extra low voltage with safe isolation. In case of PELV, the electrical circuits are grounded and (like SELV) safely isolated from circuits of higher voltages. The voltage limits are identical to SELV.

PELV is used where active low-voltage conductors or the equipment structures have to be grounded for operational reasons. That is the case, for example, where potential equalisation is required to prevent sparking inside vessels and explosive rooms.

Thanks to the housing earth, hazardous leakage currents can be discharged via the structure independently of the low voltage when interference occurs on other equipment whose touchable conductive parts receive mains voltage.

## 2.7 Protection class

The standard IEC/EN 61140 defines protection classes for electrical equipment. The devices are classified according to the safety measures taken to prevent electric shock. The protection classes are divided into the classes 0, I, II and III.

### • Protection class 0

Apart from the basic insulation there is no protection against electric shock. These devices cannot be connected to electrical installations with PE. Equipment of class 0 is not allowed in Germany. Protection class 0 will no longer be considered in future versions of the standard.

### • Protection class I

In addition to the basic insulation, all electrically conductive parts of the housing are connected to PE. This guarantees that no electric shock can occur in the event of an insulation failure.

### • Protection class II

Protection against electric shock is not only based on the basic insulation. The housing is equipped with reinforced or double insulation. If the housing is made of electrically conductive material, no direct contact between the housing and current-carrying parts is possible. The housings of class II devices are not equipped with a PE connection. It is important to note that the PE connection is not only used for the grounding of housings but also to connect filters for EMC measures (electromagnetic compatibility) to ground. This is why even devices of which the housings are completely made of plastic material can be equipped with a PE connection.

### • Protection class III

The device is operated with safety extra-low voltage (SELV) and thus does not require any protection measures. Power supplies are usually class I or II equipment.

## 2.8 Degree of protection

According to DIN EN 60529, electrical equipment is classified using so-called IP codes. IP stands for "International Protection" or "Ingress Protection". The IP code consists of two figures: The first digit specifies the protection against accidental contact and against ingress of solid foreign bodies; the second digit specifies the protection against ingress of water.

Since power supplies are mostly installed inside cabinets, their typical degree of protection is IP 20.

## 3 Input voltage ranges

### 3.1 Wide-range input

Wide-range input means that the device can be operated with any voltage within the specified limits. Lütze devices operate in the single-phase range from AC 90V to AC 264V or DC 110V to DC 370V and in the three-phase range from AC 340V to AC 576V or DC 480V to DC 820V. There is no loss of power, i.e. the device is able to deliver the specified rated power over the entire input voltage range.

### 3.2 Autorange

Power supplies that are equipped with autorange behaviour perform an internal measurement of the applied supply voltage and automatically switch between the available input voltage ranges.

## 3.3 Manual range selection

In case of manual range selection, the housing of the device is equipped with a selector switch for manual input voltage range selection. Lütze offers devices permitting operation at AC 115V or 230V.

The operating voltage range is then AC 90 V to AC 132 V; AC 185 V to AC 264 V or DC 300 V to DC 370 V.

## 4 Self-protection

If motors or other large loads have to be started with high inrush currents, secondary branches selectively switched off, systems moved to a safe state in case of overload or the power supply switched off as quickly as possible in case of fault for the sake of process safety, the output behaviour of the power supplies play a key role.

There are basically two types outside of nominal operation. Overload, which can occur sporadically or continuously, and short-circuit.

Overload means that the current required by the loads exceeds the nominal current of the power supply.

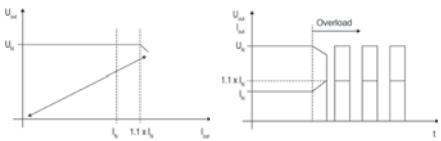

A short-circuit is a special form of overload. In this case, the outputs of the power supply are interconnected at very low resistance, as a result of which the output current may assume extremely high values.

State-of-the-art Lütze power supplies offer the following protective functions:

### Fold-back characteristic/Hiccup mode

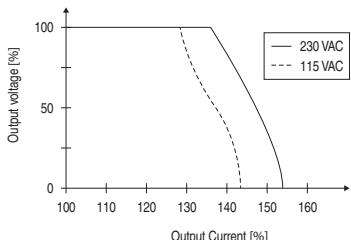

Lütze power supplies supply a current typically up to 1.2 times the nominal output current. They automatically switch off if the current consumption of the connected loads exceeds this value or if a short-circuit occurs. After a defined period of time, the power supply tries to restart the load. If the overload or the short-circuit still exists, it switches off again. This procedure repeats until the fault is cleared. The power supply has "hiccup". In applications requiring high starting currents, it must be ensured that the overload current capacity is higher than  $1.2 \cdot I_N$ . To do so, Lütze also offers devices with overload capacity of  $1.5 \cdot I_N$  featuring Hiccup mode. Another aspect is response to short-circuit. The output voltage is cut very rapidly. Whereas the use of conventional line protection equipment in the secondary circuit is very critical in any case, the function under Hiccup mode is not. Electronic overload protection units such as the Lütze LOCC-Box should always be used in such cases. They provide safe protection in all circumstances.

# Power Supplies · Basics

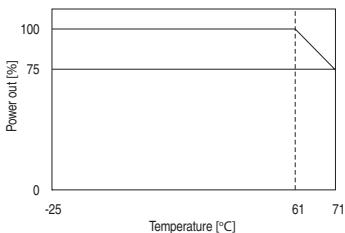

## U/I characteristic

Lütze power supplies with a U/I characteristic perform current limiting to typically 1.2 times the nominal current at constant output voltage. This current is still available in case of an overload or a short circuit. The voltage is slowly lowered, while the output current may rise further (triangular current limiting). Since the current does not sag in case of an overload, this method enables reliable starting of high loads.

## 5 Influence of ambient temperature

The ambient temperature has a direct influence on the maximum possible output power of a power supply and so on its response to short-circuit or overload. Temperatures inside cabinets may be over 60 °C as a result of internal or external influences. Power supplies still have to operate reliably even at such high temperatures. Due to the components used, however, there is a point from which the output power has to be reduced. That point is described by so-called derating. The Delta series from Lütze is rated for ambient temperatures up to 70°C for example, with derating beginning at 60°C. The reduction in output power is 2.5%/°C.

Example: Derating curve of Lütze of Delta series

## 6 Thermal protection

When operating a power supply under extreme conditions for a long duration, e.g. in case of permanent operation within the power limits or in case of very high ambient temperatures, the power supply can heat

up to a degree where safe operation is no longer guaranteed. There are a number of techniques for protecting the power supply against destruction due to overheating.

- The maximum output power is reduced, allowing the power supply to cool down.
- The device is switched off completely and cannot resume operation until a manual reset is performed. Depending on the manufacturer, the reset is done either using a corresponding switch or by disconnecting the supply voltage.
- The device only switches off the output and does not switch it on until the temperature falls below a certain limit value. This is the most frequently used method nowadays, and is the one used by LÜTZE.

## 7 General parameters

### 7.1 Open circuit resistance

Open circuit resistant power supplies require no minimum load in order to provide a stable output voltage. This is important, for example, in the case of time-critical applications in which a load is applied which has to be immediately supplied with voltage. Power supplies which are not open circuit resistant often require up to the seconds range until an actual supply takes place.

### 7.2 Resistance to reverse feed

The resistance to reverse feed specifies up to which voltage a power supply is immune against the feeding of voltages into the secondary side. Such a current flow can occur if power supplies are operated in parallel or inductive consumers are connected.

### 7.3 Overvoltage protection (secondary side)

In case of an internal error of the power supply, this protection mechanism prevents the occurrence of overvoltage on the secondary side that could possibly damage or even destroy a connected load or exceed the SELV voltage limit.

### 7.4 Power failure buffering

Power supplies must be able to maintain their output voltage for a certain time in case of supply voltage dips. Usually, a power failure buffering time of at least 20 ms is required in order to provide buffering for one complete cycle of the mains voltage. In the semiconductor industry longer time are required. The devices must then comply with the requirements of SEM F47. Most LÜTZE devices do so.

## 8 Line cross-section and protection

### 8.1 Input-side protection

If power supplies have their own input protection, such as a safety fuse, no further protective measures are necessary. However, standards stipulate that a power supply must be capable of being disconnected from the supply mains by external means. Line protection equipment can then be used. For the relevant characteristics refer to the LÜTZE data sheets.

### 8.2 Output-side protection

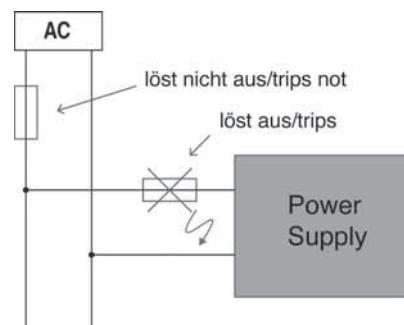

Alongside the output behaviour described in section 4, there is a U/I characteristic with an additional power reserve. However, all these output behaviour modes are ultimately not suitable for safe activation of standard line protection equipment. The reason lies in the technical design of the equipment. Only electronic protection devices capable of reacting fast enough to overload or short-circuit offer a solution. These devices also feature a high degree of repeat accuracy across the entire temperature range. With the LOCCBox LÜTZE offers intelligent DC protection modules which can also be integrated into field bus communications systems. (See also Electronic overload protection, page ).

### 8.3 Selectivity

Selectivity means the tripping coordination. In electrical systems, distinction can be made between "series selectivity", which means that individual fuses connected in series are selective against each other, and "parallel selectivity", which means that electrical circuits connected in parallel are selective against each other.

#### Series selectivity

In case of series-connected fuses, the tripping coordination of fuses is considered as selective if only the fuse installed nearest to the fault trips. Fuses that are located nearer to the energy feeding point do not trip. This guarantees that as many system parts as possible remain operative in the event of one single fault, resulting in an increased availability of electrical systems.

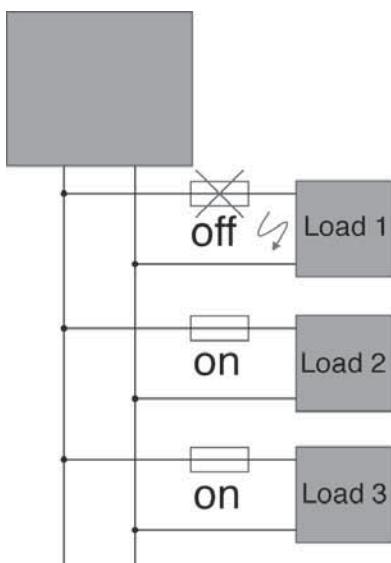

Rule of thumb:

The fuses must differ by two nominal quantities

# Power Supplies · Basics

## Parallel selectivity

Based on the self-protection, the output voltage is switched off or reduced in the event of a fault. If multiple loads are carried on one power supply, a voltage drop will occur throughout the entire application. To prevent this, protective devices are installed in the individual lines to the consumers. If a fault occurs, the protective device concerned must trip fast enough so as to disconnect the faulty consumer reliably from the rest of the system and such that the other consumers remain available.

## 8.4 Connection cross-sections

The line cross-sections are selected dependent on the maximum output current. The following table provides an overview of the current capacities of multi-core moveable copper cables with different conductor cross-sections at a temperature of 30 °C and up to a nominal voltage of 1000 V (to DIN 57100-523).

Cross-section in mm <sup>2</sup>	A
0.75	12
1	15
1.5	18
2.5	26
4	34
6	44
10	61

## 9 PFC (Power Factor Correction)

Since 1 January 2001, the European standard regarding the limits for harmonic current emissions (IEC/EN 61000-3-2) is in force. This standard defines the maximum allowed intensity of harmonic currents fed back into the supplying mains system. It is applicable for consuming devices with an active power input between 75 and 100 W that are directly connected to the public electricity supply. Power supplies for industrial applications often do not require PFC, since large installations are equipped with a central PFC, installed between the internal electrical system and the public electricity supply.

### 9.1 Passive PFC

For passive PFC, a reactance coil is connected to the input circuit. This reactance coil buffers energy from the mains and thus reduces the current pulses. The lower the pulses, the less harmonics are produced. The advantage of this solution is its easy implementation into existing circuitry. However, the drawback is that it is not able to reduce all harmonics.

### 9.2 Active PFC

Active PFC is able to deliver considerably better results. In a very simplified consideration, one could say that the actual power supply is preceded by another power supply that performs a regulation of the current consumption from the mains. This consumption is oriented towards the sinusoidal supply voltage. Using this technology, it is possible to avoid the production of almost every kind of harmonics. However, the circuitry is much more complex than for passive PFC. LÜTZE power supplies are all equipped with active PFC.

## 10 Applications

### 10.1 Parallel connection of power supplies for increased capacity Operation

An increase of the output power can be obtained by connecting power supplies in parallel. This can be necessary if the current required by the load is higher than a single power supply can deliver, for example after the expansion of an existing installation. The following preconditions must be met when connecting power supplies in parallel for the purpose of increased capacity:

- Parallel connection is only allowed for identical power supplies.
- The power supplies have to be switched on simultaneously.
- The following points must be observed when connecting the power supplies in order to prevent different voltage drops on the supply lines or at the terminals which would lead to unbalanced load at the common connection point:

- Identical lengths of the supply lines

- Identical conductor cross-sections of the supply lines

- Terminal screws have to be fastened with the same torque to guarantee equal contact resistances.

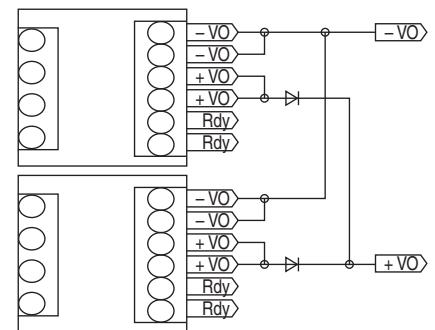

- The output voltages of the power supplies should not differ by more than 50 mV in the open circuit state. Otherwise safe operation cannot be guaranteed.

## 10.2 Redundancy

The term redundancy generally denotes the existence of several objects that are identical in functionality, content or nature.

In industrial automation, redundancy ensures that in the event of failure of a power supply another one takes over the supply, thereby maintaining operation of the system.

For this the individual power supplies must be isolated from each other, as one faulty power supply might impact on the other one. In the worst case the failed power supply effects a secondary-side short-circuit, which would result in failure of the second power supply. To isolate the power supplies from each other, isolating diodes (so-called O-ring diodes) must be looped into the secondary outputs of the power supplies. They then prevent reciprocal loading. This ensures uninterrupted power supply. In the LÜTZE Delta series the isolating diodes are built-in to the output. In the Compact series the diodes must be installed externally as follows:

LÜTZE offers isolating diodes up to a nominal current of DC20A.

# Current Control System · Basics

## Reliable protection of DC 24V circuits

### Intelligent safeguarding of selectivity

Primary switching controllers and automatic power units nowadays form the basis of the DC 24V supply level. Due to the operating behaviour of those devices, the specified selective protection of individual circuits, especially in case of overcurrent, is virtually unfeasible. A complete system shutdown is inevitable.

### Operating behaviour of primary switching controllers

Switched-mode power supplies and their components are rated for a specific nominal value and run hot under higher load. To protect against self-destructing, they shut down at between 1.1 and 2.5 times the nominal current, according to type. Many devices feature Hiccup mode, which switches off in case of overload and automatically switches back on after a short time. If the overload persists, the process repeats until the fault is manually rectified. This means a fuse is never tripped. Using devices with a forward characteristic does not deliver success either. The power supply does not switch off, but supplies only a 1.1 to 1.2 times higher output current when the output voltage is reduced. This characteristic likewise does not trip an automatic circuit-breaker, or if it does, then only in the hours range.

Furthermore, both output modes have the disadvantage that loads such as DC motors or capacitive consumers cannot be started. At additional cost, operation of heavy loads can be achieved in the simplest case by using a device with a higher output power or a device with integrated power boost.

In this, the device with power boost continuously supplies 1.2 to 1.3 times the nominal current in the temperature range up to +45°C. On reducing the output voltage, a maximum of 2.5 times the nominal current is reached which - dependent on the device itself and the characteristic of the automatic circuit-breaker - may be just enough to effect a shutdown.

### Characteristics of automatic circuit-breakers

The trip curve of an automatic circuit-breaker with characteristic B (Figure 1) is considered by way of example. To record smaller overcurrents, a thermal trip in the minutes to hours range is used (hold >1h at  $I = 1.13 \times I_{nom}$  and trip <1h at  $I = 1.45 \times I_{nom}$ ). Switch-off in case of high overcurrents is effected by immediate magnetic tripping within 0.01 to 0.1 seconds. If such a device is used in conjunction with a 10A switched-mode power supply, the switch-off occurs at 1.2 times the nominal current only after 20 to 60 minutes. Even at 2.5 times nominal current (power boost) between 25 seconds and two minutes elapse until switch-off in the thermal range. In short: essential protection - in particular selective protection of connected devices - is not provided. The fuse essentially performs a dummy function. In the event of a short-circuit or faulty wire supply would be maintained at 2.5 times nominal current. System failure or even a cable fire may be the consequence.

## Selective switch-off

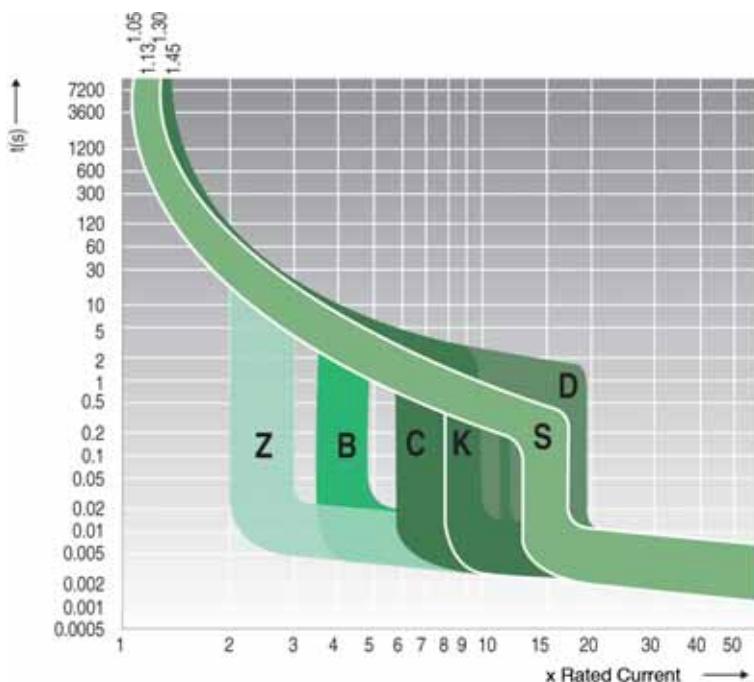

Selective load protection means that in case of overload or short-circuit only the faulty current path is switched off, with no reactive effect on the supply. The standards EN60204-1 (line protection and fire prevention) and EN 61131-1 and -2 (operating states and storage) are also applicable to the rating of the overcurrent protection device in DC 24V circuits. In concrete terms, this means withstanding a mains power failure lasting 10ms without functional impairment, which demands the deployment of large input capacities. Furthermore, hazardous overcurrents must be reduced to a safe level within 5s. Rating is made more difficult by the fact that nowadays many parallel consumers are supplied by way of one protection element.

### LÜTZE LOCC-Box – the intelligent current monitoring system

Figure 2: LOCC-Box single module

The ideal solution would be one which is capable of optimally operating capacitive loads to start heavy loads and quickly detecting an overcurrent in operation and switching off only the affected path. Such a system should of course store the fault so as to prevent danger from switching back on and permit diagnosis. The Lütze LOCC-Box system meets those requirements in a modular design with additional intelligent functions. To meet the widely varying demands on switch-off response, the LOCC-Box system features the facility to program 10 different characteristics by way of a switch. Both standard automatic unit characteristics and in particular custom characteristics can be implemented. The nominal current range can additionally be selected with locking settings from 1A to 10A. The adjustable current range and characteristic is very important when retrofitting, as in such cases the device protection often has to be modified and adapted. As additional information, the capacity utilisation of the path is indicated by an LED. When 90% of the programmed current value is reached the status LED starts to flash. In the event of a switch-off due to overcurrent or short-circuit, in addition to the visual indication by a red LED.

# Current Control System · Basics

A 24V signal is set as a collective fault warning. This eliminates the need to install and wire additional auxiliary contacts. A restart after clearing the fault is then effected either using the mechanical switch on the device or from the main system by remote control. This channel-based switching facility is of great importance in particular in the commissioning phase of a system, as it enables individual system components to be activated and checked specifically.

## LOCC-Box Practical and efficient

The monitoring function itself is one side of the coin. The other in many other systems is the associated mechanism. Frequently multi-channel solutions are offered on the market which only make sense if exactly the

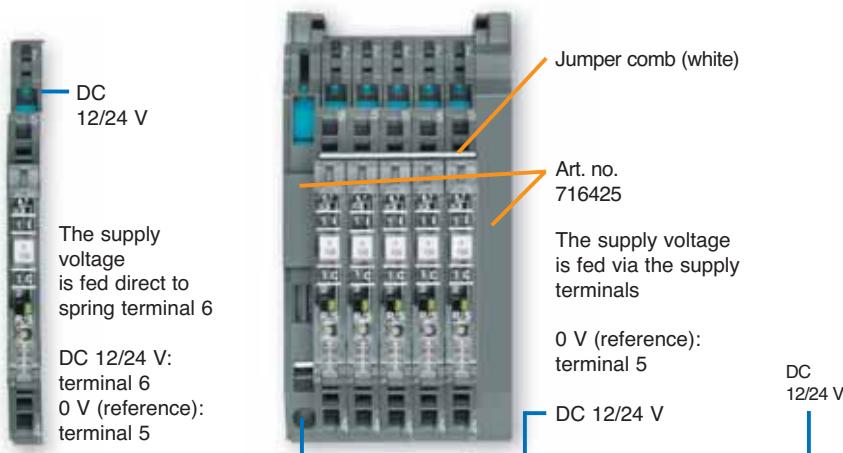

available channels are required. If that is not the case, or if only one channel has to be additionally implemented subsequently, money and space will be wasted. Another disadvantage of this solution is the looping of up to 40A via a printed circuit board. This entails an enormous load on the carrier material and interruption of the entire supply when a device is replaced. What in other areas of automation has been state of the art for over 10 years is also ideal here as the solution in a highly modular configuration!

Here, too, the LOCC-Box system is setting new standards. The single-channel design with all the functionality described offers the highest possible flexibility. As shown below, customers can decide whether the supply is provided by each module individually or via the system supply (infeed terminal, copper

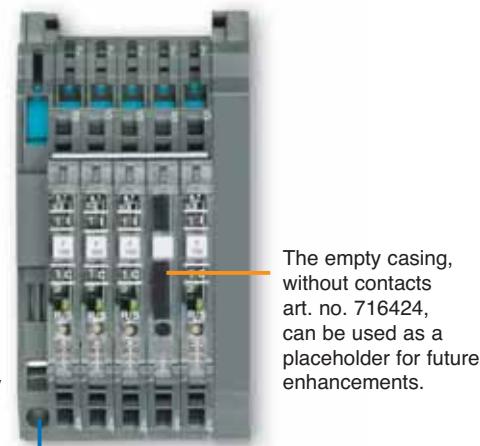

rail, end terminal). The particular advantage of this method of infeed is the screwless contact carriage, which permits exchanging of individual channels in operation without interrupting the entire supply. This additional provides functionality to switch off individual paths to perform essential work safely. The maximum supply current is dictated by the 6mm<sup>2</sup> terminal, and is DC 40A. The slim width of just 8.1mm results in an installed width of just 340mm even with a 40-channel configuration. The system housing is complemented by name plate labels, seals and a jumper system to loop signals.

## Standard Application

without supply set, art. no. 716425 with supply set, art. no. 716425

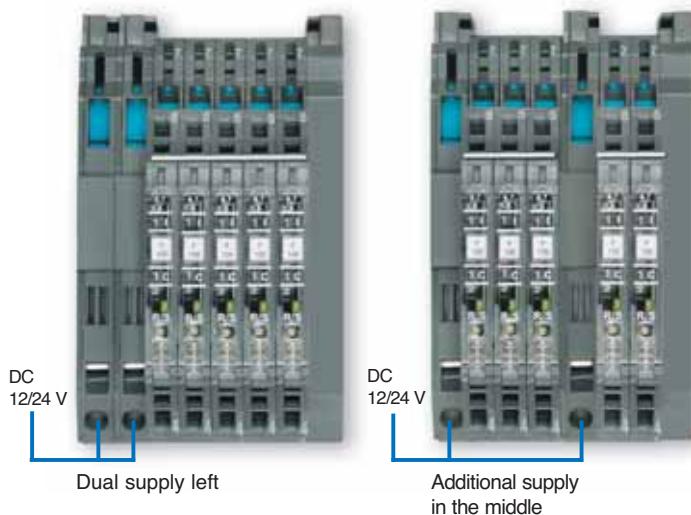

## Empty housing as placeholder

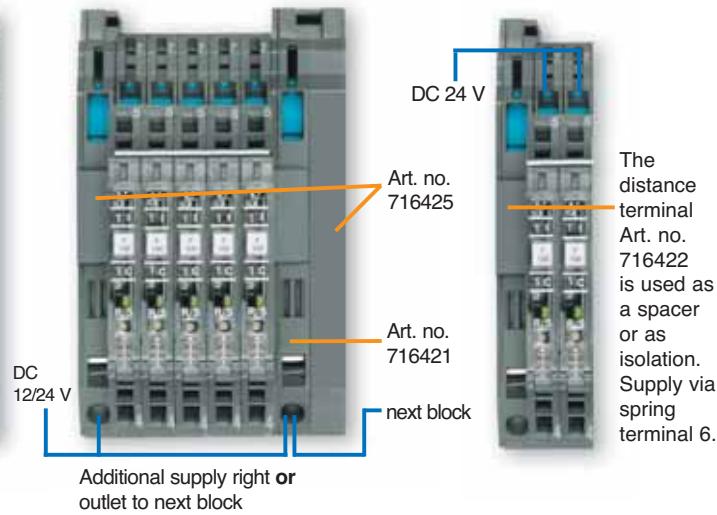

## Use with additional supply terminals

Supply set, art. no. 716425 and supply terminal, art. no. 716421

The supply terminal is accessed via an aperture in the left hand side wall. This enables a variable positioning in the system construction. The maximum total current can thus be increased to 70 A.

# Power supply - regulated, 10 W

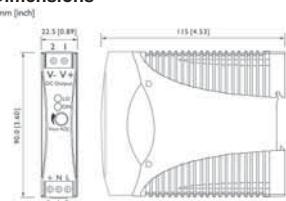

**Primary switchmode power supply, Single-phase, Class 2**

**Input: wide-range input AC 90–265 V, DC 120–370 V**

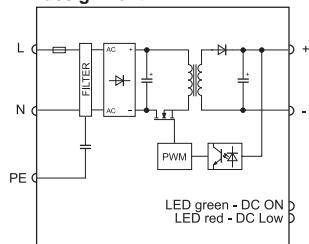

**Output: 5 V / 12 V, adjustable**

Description	Part-No.	Type	PU
<b>Screw terminal</b>			
Output voltage/current	DC 5 V/ 2 A	DRA 10-05A	1
	DC 12 V/ 0.84 A	DRA 10-12A	1
<b>Input</b>	<b>DRA 10-05A</b>	<b>DRA 10-12A</b>	
Nominal voltage	AC 100–240 V		
Operation voltage range	AC 90–265 V / DC 120–370 V		
Line frequency	47 – 63 Hz		
Rated current	$U_i = \text{AC } 115 \text{ V: } 120 \text{ mA} / U_i = \text{AC } 230 \text{ V: } 70 \text{ mA}$		
Inrush current	$U_i = \text{AC } 115 \text{ V: } 10 \text{ A} / U_i = \text{AC } 230 \text{ V: } 18 \text{ A}$		
Internal fuse	T2 A / AC 250 V		
External fuse	Mini-circuit breaker: B 4 A		
Power Factor Correction P.F.C.	–		
<b>Output</b>			
Rated voltage output	DC 5 V	DC 12 V	
Rated current output	2 A	0.84 A	
Max. output current	–		
Short-circuit current	–		
Voltage trim range	4.5–5.75 V	10.8–13.8 V	
Accuracy	±1 %		
Line regulation	±1 %		
Load regulation	±2 %		
Rise time	1 s		
Temperature coefficient	±0.03 % / °C		
Ripple & Noise	<50 mV		
Hold up time	$V_{in} = 115 \text{ V: } 25 \text{ ms} / V_{in} = 230 \text{ V: } 100 \text{ ms}$		
Status indication DC ON LED green	$\geq 4.5 \text{ V}$	$\geq 10.8 \text{ V}$	
Status indication DC LOW LED red	$<3.75–4.50 \text{ V}$	$<9–10.8 \text{ V}$	
Parallel/redundant operation	max. 2 devices / via external diodes		
Efficiency	73 %	75 %	
Low power loss	4 W (AC 230 V)	3.4 W (AC 230 V)	
Rated over load protection	110–135 %		
Over voltage protection	125–145 %		
Short circuit characteristics	Hiccup-mode		
<b>General</b>			
Switching frequency	approx. 100 kHz		
Insulation voltage input/output	AC 3.0 kV <sub>eff</sub>		
Insulation voltage input / ground	AC 1.5 kV <sub>eff</sub>		
Insulation voltage output / ground	–		
Insulation resistance at DC 500 V	100 MΩ		
Operation temperature range	-20 °C – 70 °C (derating)		
Derating	-3% / °C starting at 61 °C		
Storage temperature range	-25 °C – 85 °C		
M.T.B.F.	801000 h	803000 h	
Relative humidity	20–95% RH, non-condensing		
Dimensions (w × h × d) in mm	22.5 × 90.0 × 115.0		
Cooling	Natural air cooling, 25 mm distance on all sides		
Housing material	Plastic		
Field installation	rail TS 35 (EN 50022)		
Application height	2000 m		
Installation position	vertical		
Protection class	IP 20		
IP rating	II (SELV, PELV)		
Oversupply category	II		
Pollution degree	2		
Weight (kg/piece)	0.120		
Termination	Screw terminal: 0.2–2.5 mm <sup>2</sup> , max. 0.56 Nm		
Approvals	UL: UL 508 listed; cUL: UL 60950-1, UL 1310 Class 2; TÜV: EN 60950-1, CE: EN 50081-1 / EN 55022 Class B, EN 61000-3-2, EN 601000-3-3, EN 50082-1 / EN 55024 Class I, Division 2, Groups A, B, C and D

\* Redundant Module 722987

Description	Part-No.	Type	PU
<b>Screw terminal</b>			
Output voltage/current	DC 24 V/ 5 A	722803	WRA 120-24
			1
<b>Input</b>		<b>WRA 120-24</b>	
Nominal voltage	3x AC 380–480 V		
Operation voltage range	3x AC 340–575 V, 3x DC 480–820 V		
Line frequency	47 – 63 Hz		
Rated current	$U_f = \text{AC } 380 \text{ V}: 0.5 \text{ A} / U_f = \text{AC } 500 \text{ V}: 0.35 \text{ A}$		
Inrush current	10 A		
Internal fuse	3xT2, 0 A / AC 600 V		
External fuse	Automatic: 3 x B 6 A		
Power Factor Correction P.F.C.	0.6		
<b>Output</b>			
Rated voltage output	DC 24 V		
Rated current output	5 A		
Max. output current	—		
Short-circuit current	—		
Voltage trim range	22.5/28.5 V		
Accuracy	1 %		
Line regulation	±1 %		
Load regulation	±1 %		
Rise time	1 s		
Temperature coefficient	±0.03 % / °C		
Ripple & Noise	100 mV		
Hold up time	min. 20 ms		
Status indication DC ON LED green	≥17.6–19.4 V		
Status indication DC LOW LED red	≤17.6–19.4 V		
Parallel/redundant operation	max. 2 devices / via external diodes		
Efficiency	89 %		
Low power loss	16 W (AC 380 V)		
Rated over load protection	115 – 135 %, temperature: disconnection at 100–110 °C and automatic activation when cool off		
Over voltage protection	125–137 %		
Short circuit characteristics	Hiccup-mode		
<b>General</b>			
Switching frequency	approx. 70 kHz		
Insulation voltage input/output	AC 3.0 kV <sub>eff</sub>		
Insulation voltage input / ground	AC 1.5 kV <sub>eff</sub>		
Insulation voltage output / ground	—		
Insulation resistance at DC 500 V	100 MΩ		
Operation temperature range	-25 °C – 71 °C (derating)		
Derating	Capacity: -2.5 % / °C starting at +61 °C		
Storage temperature range	-25 °C – 85 °C		
M.T.B.F.	559000 h		
Relative humidity	20–90% RH, non-condensing		
Dimensions (w x h x d) in mm	74.3 x 123.6 x 118.8		
Cooling	Natural air cooling, 25 mm distance on all sides		
Housing material	Metal		
Field installation	rail TS 35 (EN 50022)		
Application height	3000 m		
Installation position	vertical		
Protection class	IP 20		
IP rating	I (SELV, PELV)		
Oversupply category	II		
Pollution degree	2		
Weight (kg/piece)	0.800		
Termination	Screw terminal: 0.2–4.0 mm <sup>2</sup> , max. 0.62 Nm		
Approvals	UL: UL 508 listed, cUL: UL 60950-1 accepted, TÜV: EN 60950-1; CE: EN 61000-6-3 / EN 55022 Class B, EN 61000-3-2, EN 61000-3-3, EN 61000-6-2, EN 55024 Class I, Division 2, Groups A, B, C and D		
<b>Monitoring</b>			
DC ON Control (Rdy)	Normally open		
Switching voltage	DC 60 V		
Switching current	max. 300 mA		
Switching capacity	—		
Insulation voltage	DC 500 V		

# Power supply - regulated, 240 W

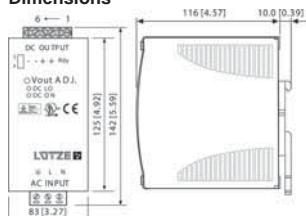

## Primary switchmode power supply, PFC, Single-phase

**Input:** wide-range input AC 93–132 V, AC 186–264 V, DC 210–370 V

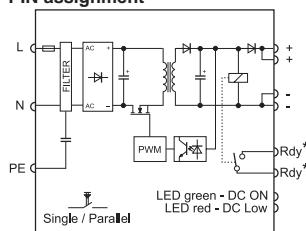

**Output:** 24 V / 48 V, adjustable

Insulation voltage	AC 100 V		

# COMPACT Power Supplies

## COMPACT Series

- One-, two- and three-phase
- 30 W to 2400 W
- Overload current 150 %, 5 sec
- Extremely compact
- Parallel operation
- Overload and short circuit protection
- Redundant operation
- Up to 95% efficiency
- Protection class 1
- UL Listed
- SEMI F47

# Power supply - regulated, 40 W

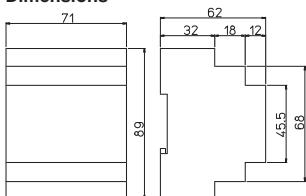

## Primary switchmode power supply, PFC, Single-phase, Class 2

**Input:** wide-range input AC 90–264 V, DC 120–370 V

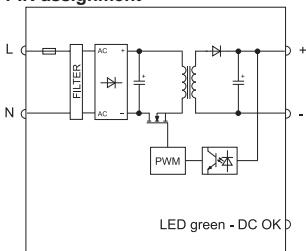

**Output:** DC 24 V

Status indication DC ON LED green	$\geq 21.6 \text{ V}$	$\geq 43.2 \text{ V}$	
Status indication DC LOW LED red	$\leq 21.6 \text{ V}$	$\leq 43.2 \text{ V}$	
Parallel/redundant operation	max. 2 devices / via internal diodes		
Efficiency	89 %	90 %	
Low power loss	<35 W	<34 W	
Rated over load protection	yes		
Over voltage protection	yes		
Short circuit characteristics	Hiccup-mode		
<b>General</b>			
Switching frequency	approx. 110 kHz		
Insulation voltage input/output	AC 3.0 kV <sub>eff</sub>		
Insulation voltage input / ground	AC 1.5 kV <sub>eff</sub>		
Insulation voltage output / ground	AC 0.5 kV <sub>eff</sub>		
Insulation resistance at DC 500 V	– MΩ		
Operation temperature range	-20 °C – 70 °C (derating)		
Derating	>50 °C: -5 W / °C		
Storage temperature range	-25 °C – 85 °C		
M.T.B.F.	>500000 h to SN29500 / >150000 h to MIL standard HDBK 217F		
Relative humidity	20–90% RH, non-condensing		
Dimensions (w × h × d) in mm	63.5 × 140.0 × 139.0		
Cooling	Natural air cooling, 20 mm distance right/left, 100 mm distance above/below		
Housing material	Aluminium		
Field installation	rail TS 35 (EN 50022)		
Application height	– m		
Installation position	vertical		
Protection class	IP 20 (IEC529, EN60529)		
IP rating	I (SELV, PELV)		
Oversupply category	III		
Pollution degree	2		
Weight (kg/piece)	0.720		
Termination	Screw terminal: 0.2–2.5 mm <sup>2</sup> – pluggable, max. 0.56 Nm		
Approvals	UL, cUL: UL 508, IEC 950, EN 60950, UL 60950 CE: EN 61000-4-2/3/4/5/6/11, EN 61000-6-2, EN 61000-6-4, EN 50178, EN 61558, EN 50081-1, EN 50082-2, EN 55022 Class B		
<b>Monitoring</b>			
DC ON Control (Rdy)	Normally open		
Switching voltage	AC 300 V / DC 150 V		
Switching current	AC/DC 1 A		
Switching capacity	300 VA / 30 W		
Insulation voltage	AC 500 V		

# Power supply - regulated, 240 W

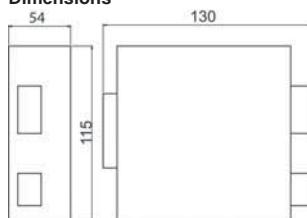

**Primary switched power supplies, PFC, 1/2/3-phase**

**Input: wide-range input AC 187–550 V, DC 250–725 V (UL: DC 300–500 V)**

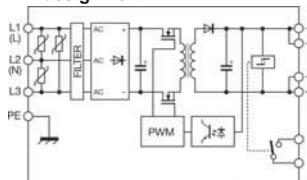

**Output: 24 V, adjustable**

\* Redundant Module 722987

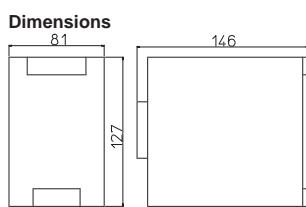

Description	Part-No.	Type	PU
<b>Screw terminal, pluggable</b>			
Output voltage/current	DC 24 V/ 10 A	722996	CPSB2-123-240-24
			1
<b>Input</b>		<b>CPSB2-123-240-24</b>	
Nominal voltage		AC 200–500 V	
Operation voltage range		AC 187–550 V / DC 250–725 V (UL: DC 300–500 V)	
Line frequency		47 – 63 Hz	
Rated current		1-/2-phase @ AC 220 V: 2.2 A, 1-/2-phase @ AC 500 V: 1.1 A 3-phase @ AC 220 V: 1.5 A, 3-phase @ AC 500 V: 0.8 A	
Inrush current		<20 A (AC 230 V), <40 A (AC 500 V)	
Internal fuse		–	
External fuse		Automatic: D 4 A, C 6 A / safety fuse: T 6.3 A (required)	
Power Factor Correction P.F.C.		>0.60 @ AC 230 V, >0.5 @ AC 400 V	
<b>Output</b>			
Rated voltage output		DC 24 V	
Rated current output		10 A	
Max. output current		>15 A, 5 s	
Short-circuit current		38 A, 5 s	
Voltage trim range		23-27,5 V	
Accuracy		–	
Line regulation		–	
Load regulation		<1 %	
Rise time		14 ms (5–95 %) @ 400 V	
Temperature coefficient		–	
Ripple & Noise		<100 mV pp	
Hold up time		>15 ms (AC 230 V), >100 ms (AC 500 V)	
Status indication DC ON LED green		≥21.6 V	
Status indication DC LOW LED red		≤21.6 V	
Parallel/redundant operation		yes/with external decoupling diode	
Efficiency		>91 % @ AC 230 V, >92% @ AC 400 V	
Low power loss		<24 W @ AC 230 V, <21 W @ AC 400 V	
Rated over load protection		yes	
Over voltage protection		> DC 33 V	
Short circuit characteristics		Hiccup-mode	
<b>General</b>			
Switching frequency		–	
Insulation voltage input/output		AC 3.0 kV <sub>eff</sub>	
Insulation voltage input / ground		AC 2.0 kV <sub>eff</sub>	
Insulation voltage output / ground		AC 0.5 kV <sub>eff</sub>	
Insulation resistance at DC 500 V		– MΩ	
Operation temperature range		-20 °C – 60 °C (overtemperature protection)	
Derating		-6 W/C from +50 °C	
Storage temperature range		-25 °C – 85 °C	
M.T.B.F.		>500000 h to SN29500 / >150000 h to MIL standard HDBK 217F	
Relative humidity		20–90% RH, non-condensing	
Dimensions (w × h × d) in mm		54.0 × 130.0 × 115.0	
Cooling		Air convection 20 mm clearance right/left, 50 mm clearance up/down	
Housing material		Aluminium	
Field installation		rail TS 35 (EN 50022)	
Application height		2000 m	
Installation position		vertical	
Protection class		IP 20 (IEC529, EN60529)	
IP rating		I (SELV, PELV)	
Oversupply category		II (IEC 664-1)	
Pollution degree		2	
Weight (kg/piece)		0.650	
Termination		Screw terminal: 0.2–2.5 mm <sup>2</sup> (AWG 30–12) - pluggable	
Approvals		UL, cUL: UL 508, IEC 60950 CE: EN 60950, EN 61000-6-2 (2005), EN 60100-6-4 (2007), EN 61000-4-2/3/4/5/6/11, EN 61000-5-5 EN 55011 (conducted emission class B, radiated emission class A)	
<b>Monitoring</b>			
DC ON Control (Rdy)		Change over contact	
Switching voltage		DC 30 V	
Switching current		DC 1 A	
Switching capacity		30 W	
Insulation voltage		AC 500 V	

# Power supply - regulated, 480 W

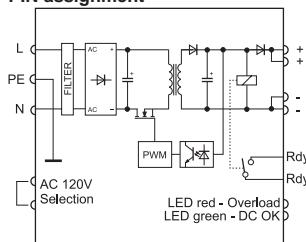

## Primary switchmode power supply, PFC, Single-phase

**Input:** AC 90–132 V, AC 187–264 V

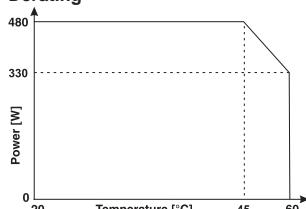

**Output:** 24 V, adjustable

Parallel/redundant operation	max. 2 devices / via external diodes		
Efficiency	>90 % (AC 400 V)		
Low power loss	27 W (AC 380 V)		
Rated over load protection	yes		
Over voltage protection	yes		
Short circuit characteristics	Hiccup-mode		
<b>General</b>			
Switching frequency	–		
Insulation voltage input/output	AC 3.0 kV <sub>eff</sub>		
Insulation voltage input / ground	AC 2.0 kV <sub>eff</sub>		
Insulation voltage output / ground	AC 0.5 kV <sub>eff</sub>		
Insulation resistance at DC 500 V	– MΩ		
Operation temperature range	-20 °C – 60 °C (derating)		
Derating	>50°C: -4.8 W / °C		
Storage temperature range	-25 °C – 85 °C		
M.T.B.F.	>500000 h to SN29500 / >150000 h to MIL standard HDBK 217F		
Relative humidity	20–90% RH, non-condensing		
Dimensions (w × h × d) in mm	90.0 × 130.0 × 104.5		
Cooling	Natural air cooling, 10 mm distance right/left, 50 mm distance above/below		
Housing material	Aluminium		
Field installation	rail TS 35 (EN 50022)		
Application height	– m		
Installation position	vertical		
Protection class	IP 20 (IEC529, EN60529)		
IP rating	I (SELV, PELV)		
Oversupply category	II		
Pollution degree	2		
Weight (kg/piece)	0.700		
Termination	Screw terminal: 0.2–4.0 mm <sup>2</sup> , max. 0.62 Nm		
Approvals	UL, cUL: UL 508, IEC 950, EN 60950 CE: EN 61000-4-2/3/4/5/6/11, EN 61000-6-2, EN 601000-6-4, EN 50178, EN 61558, EN 50081-1, EN 50082-2, EN 55022 Class B		
<b>Monitoring</b>			
DC ON Control (Rdy)	Changeover contact		
Switching voltage	AC 300 V / DC 150 V		
Switching current	AC/DC 1 A		
Switching capacity	300 VA / 30 W		
Insulation voltage	AC 500 V		

# Power supply - Redundancy module

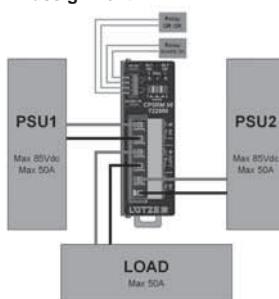

**Redundant module 12 to 85 V, 50 A**  
**Potential-free signalling contact**  
**Status LED per input**

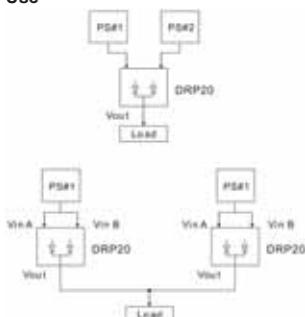

## Dimensions

## PIN assignment

## Use

Description	Part-No.	Type	PU
<b>Screw terminal</b>			
Output voltage/current	DC 12 V–85 V/50 A 722999	CPSRM50	1
<b>Input</b>	<b>CPSRM50</b>		
Nominal voltage	—		
Operation voltage range	DC 12–85 V		
Inputs	2		
Rated current	max. 50 A per input		
Internal fuse	—		
External fuse	—		
<b>Output</b>			
Rated voltage output	—		
Rated current output	—		
Max. output current	300 A		
Voltage drop	<0.2 V		
Inverse voltage	—		
Low power loss	Max. 10 W		
No-load power	<1.5 W		
Status indication DC ON LED green	IN1, IN2 OK		
Status indication DC ON LED red	Redundancy error		
Overtemperature protection	No		
Over voltage protection	No		
<b>General</b>			
Operation temperature range	-20 °C – 50 °C		
Derating	—		
Storage temperature range	-25 °C – 85 °C		
M.T.B.F.	—		
Dimensions (w × h × d) in mm	40.0 × 115.0 × 110.0		
Cooling	Air convection		
Housing material	Aluminium		
Field installation	rail TS 35 (EN 50022)		
Application height	– m		
Installation position	vertical		
Protection class	IP 20 (IEC529, EN60529)		
Overvoltage category	II		
Pollution degree	2		
Weight (kg/piece)	0.200		
Termination	Input: pluggable screw connection: 0,2–16 mm <sup>2</sup> Output: pluggable screw connection: 0,2–16 mm <sup>2</sup> Relay: pluggable screw connection: 0,2–1,5 mm <sup>2</sup>		
Approvals	UL, cUL: UL 508 listed, UL 60950-1 recognised CE: EN 55022 Class B, EN 55024 CE: EN 61000-4-2/3/4/6/8, EN 61204-3		
<b>Monitoring</b>			
DC ON Control (Rdy)	N/O contact		
Switching voltage	Ac 300 V/DC 24 V		
Switching current	AC/DC 1 A		
Switching capacity	300 VA / 30 W		
Insulation voltage	DC 100 V		

# Power supply - regulated, 2400 W

## Primary switchmode power supply, PFC, 3-phase

**Input:** Wide range input AC 340 - 550 V

**Output:** DC 24 V, 100 A / DC 48 V, 50 A

### Range of functions

The new power compact series provides a number of additional adjustment options via function keys. The selected functions are shown on a display. In addition, the current output voltage and current are displayed for normal operation.

### Input protection

- Active Surge suppressor and inrush limiter (ASSIL) as protection against overvoltages according to VDE 0160
- PFC error monitoring
- Phase monitoring with automatic reduction of the output power
- Automatic start/restart system for over- and undervoltages

### Output protection

- Adjustable current limiting between 0.1  $I_N$  and  $I_N$
- Hiccup autoreset based on current limiting or maximum output voltage (150%)

### Status display and signal

- In addition to an LED for "DC OK" and error displays, the devices have the following analog outputs 0–10 V and 4–20 mA as direct function of the load current

- Programmable relay contact with the functions
  - Output voltage/current,
  - Overload,
  - Overtemperature

### Additional functions

- Temperature-compensated battery charging function
- Display and compensation of the voltage drop for long cables
- Remote On/Off of the output voltage
- DC 12 V auxiliary voltage
- Monitoring and control interface based on RS232 (optional)
- Integrated O-ring diode
- Load sharing in parallel operation
- Load current sharing

Description	Part-No.	Type	PU
<b>Screw terminal</b>			
Output voltage/current	DC 24 V/100 A 722814	CPSB3-2400-24	1
	DC 48 V/50 A 722816	CPSB3-2400-48	1
<b>Input</b>	<b>DC 24 V/100 A</b>	<b>DC 48 V/50 A</b>	
Nominal voltage	3x AC 400–500 V		
Operation voltage range	AC 340 V–550 V/DC 520 V–750 V		
Line frequency	47 – 63 Hz		
Rated current	$U_i = \text{AC } 400 \text{ V}: 4,5 \text{ A} / U_i = \text{AC } 500 \text{ V}: 3,5 \text{ A}$		
Inrush current	<AC 10 A (active inrush current limitation)		
Internal fuse	–		
External fuse	Automat: 3 x C 10 A (mandatory)		
Power Factor Correction P.F.C.	>0,92		
Input protection	Surge protection according to VDE 0160, over/undervoltage (auto restart) Phase monitoring (reduced output power): PFC error		
<b>Output</b>			
Rated voltage output	DC 24 V	DC 48 V	
Rated current output	100 A	50 A	
Max. output current	>150 A, 5 s, mit $U_{out}>90\%$	>75 A, 5 s, mit $U_{out}>90\%$	
Short-circuit current	150 A, 5 s	75 A, 5 s	
Voltage trim range	DC 11,5–29 V	DC 23–56 V	
Load regulation	<1 %		
Rise time	<4,5 s		
Temperature coefficient	–		
Ripple & Noise	<200 mV		
Hold up time	>10 ms (AC 400 V); >10 ms (AC 500 V)		
Status indication DC ON LED green	alphanumeric display		
Status indication DC LOW LED red	alphanumeric display		
Parallel/redundant operation	max. 4 devices		
Efficiency	>92 %		
Low power loss	<200 W		
Over voltage protection	>30 V		
Short circuit characteristics	adjustable: Hiccup, current limiting		
<b>General</b>			
Insulation voltage input/output	AC 3.0 kV <sub>eff</sub>		
Insulation voltage input / ground	AC 1.5 kV <sub>eff</sub>		
Insulation voltage output / ground	AC 0.5 kV <sub>eff</sub>		
Operation temperature range	-20 °C – 60 °C (derating)		
Derating	>45 °C: -40 W/C		
Storage temperature range	-25 °C – 85 °C		
M.T.B.F.	>500000 h to SN29500 / >150000 h to MIL standard HDBK 217F		
Dimensions (w × h × d) in mm	233.0 × 158.0 × 102.0		
Cooling	Natural air cooling, forced cooling >45°C, 80 mm distance top/bottom, 10 mm side		
Housing material	Aluminium		
Field installation	rail TS 35 (EN 50022)		
Installation position	vertical		
Protection class	IP 20 (IEC529, EN60529)		
IP rating	I (SELV, PELV)		
Oversupply category	II		
Pollution degree	2		
Weight (kg/piece)	2.800		
Termination	Screw connection: input 0.2–4.0 mm <sup>2</sup> /output 0.2–35 mm <sup>2</sup> /auxiliary 0.2–1.5 mm <sup>2</sup>		
Approvals	Standards: UL 508, IEC 950, EN 60950, EN 55011 CE: EN 61000-4-5, Surge immunity level IV, VDE 0160 CE: EN 61000-4-2/3/4/5/6/11		
<b>Monitoring</b>			
DC ON Control (Rdy)	Relay, N/O contact active, adjustable, DCok: 90–110 % Uset, ACok: acc. input voltage range, overload Overttemperature range, charging complete		
Switching capacity	AC/DC 30 V, 1 A, 30 W		
Insulation voltage	AC 500 V		
Output current	galvanically isolated: 0–10 V and 4–20 mA		
<b>Interface</b>			
User Interface	LCD display 16 × 2 character, multi language, 4 keys (command and navigation)		
Auxiliary voltage output	galvanically isolated DC 12 V, 100 mA		
NTC	Temperature-controlled battery charging (mandatory)		

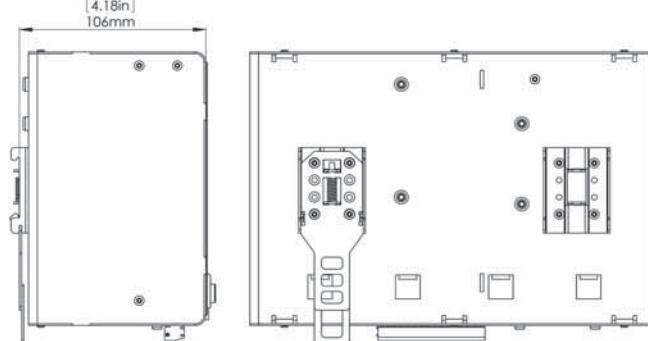

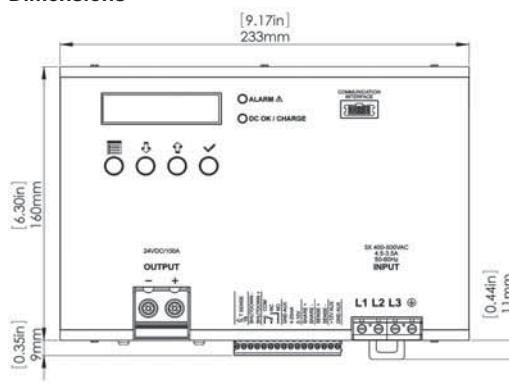

# Power supply - regulated, 2400 W

Primary switchmode power supply, PFC, 3-phase

Input: Wide range input AC 340 - 550 V

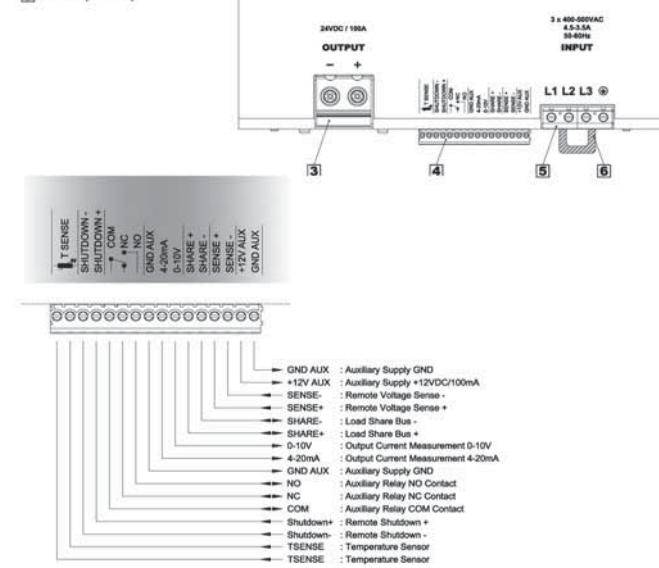

Output: DC 24 V, 100 A / DC 48 V, 50 A

## Dimensions

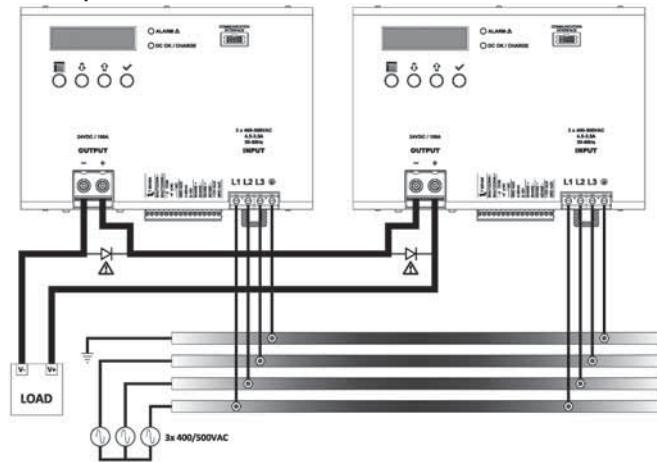

## PIN assignment

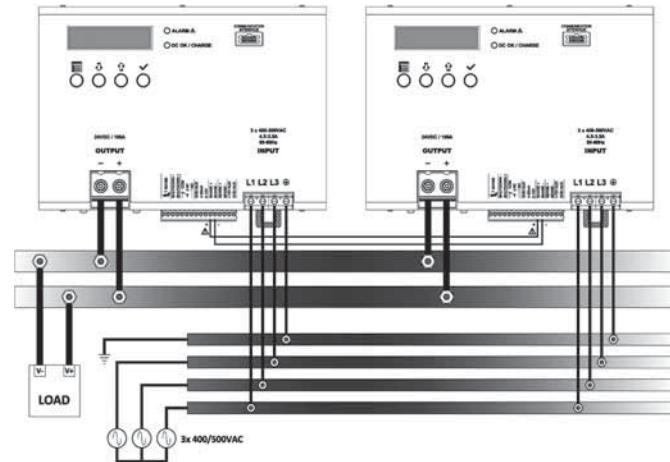

- ① Display
- ② Control Keys
- ③ Output Connector
- ④ Auxiliary Connector
- ⑤ Input Connector
- ⑥ DIN Rail Fixing Clamp
- ⑦ Communication Interface
- ⑧ Status LEDs
- ⑨ Buzzer (Internal)

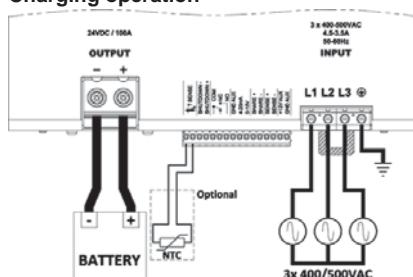

## Serial operation

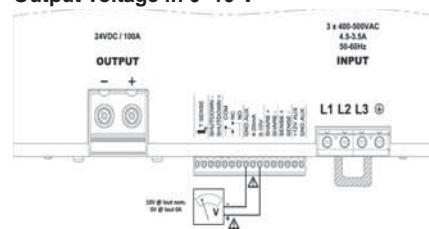

## Parallel/redundant mode

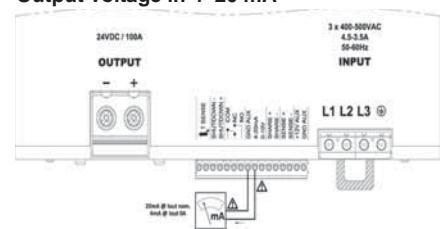

## Charging operation

## Output voltage in 0-10 V

## Output voltage in 4-20 mA

# Modular, flexible and safe: LOC

## The intelligent LÜTZE Overload

**Adjustable rated current**  
(1 A...10 A in 1 A Steps)

**Adjustable characteristic**  
(fast- ... slow acting)

**“Power-ON”-effect**  
to switch on capacitive loads

**Single or centralized fault indication**

**Last status memorization**

**Spring terminals**

**Small device – width 8,1mm**

**Response time independent  
of temperature**

**Contact slots for each potential usable  
for jumper combs**

**Solid state relay with current control  
switching frequency up to 1 kHz**

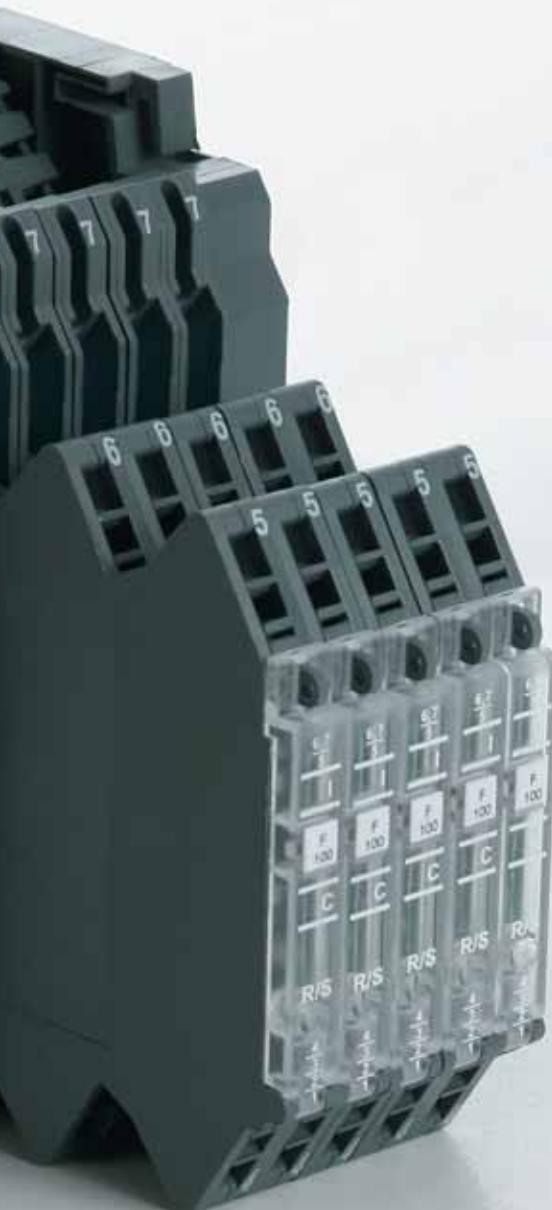

**Contact slots for each potential usable for  
jumper combs**

# C-Box / LOCC-Box-Net

## Current Control System

*Sky*BLUE

**Remote ON / OFF**

**Manual ON / OFF**

**Status indication “operation”, “fault”,  
“90 % load” and “100 % load”**

**Adjustment cover accommodates  
lock out tags**

**Flammability class  
UL-94-V0; NFF I2,F2**

**Power distribution via direct  
supply or supply set**

**Optional remote Gateway interface**

**UL 508 Listed**

The picture shows 5 x LOCC-Box incl. supply set

# Intelligent current monitoring management system: LCOS-C

**Flammability class**

UL 94-V0

**Bus coupler** for all conventional systems

**Adjustable characteristics**

**Adjustable rated current**

**Manual On /Off**

**2-channel design**

**2-pole disconnection**

**"Power ON" effect**

**Saving of the last status**

**Temperature-independent response time**

**Supply** - also with galvanic insulation

**Clear labelling**

# and energy C

## SkyBLUE

**Intermediate in-feed option**

**Status output operation**  
failure, manual switch-off, 90 % capacity

**Remote On/Off**

**Modular expandable  
data bus**

**Modular expandable  
power bus**

**Integrated protection  
against alignment**

**UL508,  
GL approvals**

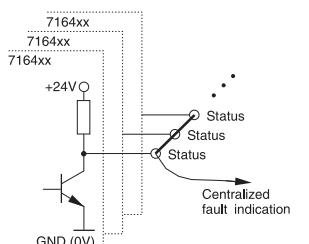

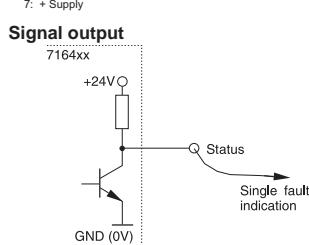

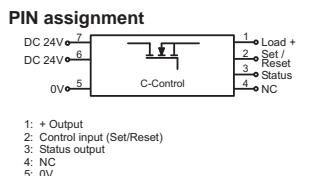

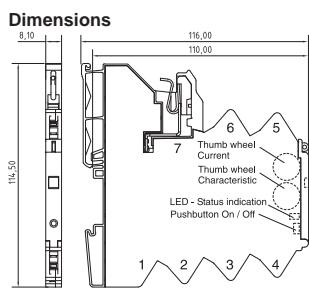

**Plug-in functional  
assemblies**

# Load monitoring - Microcompact LOCC-Box

**Electronic load monitoring up to DC 10 A**

**Single-channel design, Adjustable current range: DC 1 A – 10 A**

**Adjustable characteristics, fast, medium-speed, slow 1, -2, -3**

# Load monitoring - Microcompact LOCC-Box

**Electronic load monitoring up DC 48 V to DC 6 A**

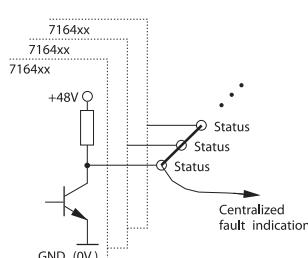

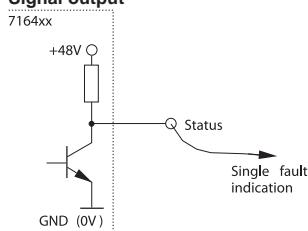

**Single-channel design, Adjustable current range: DC 1 A – 6 A**

**Adjustable characteristics, fast, medium-speed, slow 1, -2, -3**

- 1: + Output
- 2: Control input (Set/Reset)
- 3: Status output
- 4: not used
- 5: 0V
- 6: + Supply (alternative)
- 7: + Supply

**Signal output**

Description	Part-No.	Type	PU
<b>Spring terminal</b>			
Nominal voltage	DC 48 V	716406	LOCC-Box-FB48 7-6406
			1
<b>Input</b>		LOCC-Box-FB48 7-6406	
Nominal voltage	DC 48 V		
Operation voltage range	DC 39 V – 58 V		
Rated current	DC 6 A		
Supply current	DC 40 A over Cu-rails 10 × 3 mm		
Reverse voltage protection	internal electronics		
Termination	screwless disconnect slide		
<b>Control input (Set / Reset)</b>			
Signal level	DC 48 V (EN 61131)		
OFF	Pulse with falling edge >100 ms, <800 ms		
ON	Pulse with falling edge > 1 s		
<b>Output</b>			
Switching element	MosFet		
Output current	max. DC 6 A		
Voltage drop	<85 mV (6 A)		
Status Indication	LED green: Operating voltage present, no error LED red: Error in load circuit		
Switch-on capacity	1000 µF		
Current range	1 A – 6 A (adjustable via switch in 1 A steps)		
Characteristic	fast-acting (1), medium-slow (2), slow 1 (3), slow 2 (4), slow 3 (5)		
Current limitation	13,75 A		
<b>Signal output</b>			
Signal level	DC 48 V: operating voltage on standby, no error, DC 0 V: error, output switched off and manual "OFF"		
Switching element	Transistor, collector with pull-up resistance		
<b>General</b>			
Housing material	PA 6.6 (UL 94-V0; NFF I2, F2)		
Field installation	rail TS 35 (EN 50022)		
Protection class	IP 20		
Installation position	Optional		
Termination	Spring terminal 0.25–2.5 mm <sup>2</sup>		
Operation temperature range	-25 °C – 50 °C		
Storage temperature range	-40 – 75 °C		
Dimensions (w × h × d) in mm	8.1 × 114.5 × 116.0		
Weight (kg/piece)	0.120		
Approvals	cULus in preparation		
Standards	EN 60950-1; EN 61131-1,2; EN 61000; EN 60947-4-1; EN 55022

## LOCC-Box supply set consisting of supply terminal and end block maximum total current 40 A

**Dimensions**  
Supply terminal

End block

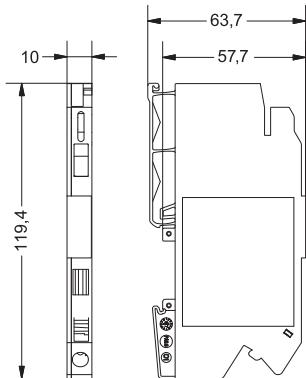

Description	Part-No.	Type	PU
Nominal voltage	DC 12 / 24 V	716425	LOCC-Box-ES 7-6425
<b>Input</b>	<b>LOCC-Box-ES 7-6425</b>		
Nominal voltage	DC 12 / 24 V		
Rated current	max. DC 40 A		
Reverse voltage protection	No		
Termination	Spring terminal : 0.33 – 10 mm <sup>2</sup> (AWG 22–8) conductor connection cross section, single wire (solid): max. 10 mm <sup>2</sup> conductor connection cross section, fine wire: max. 6 mm <sup>2</sup> conductor connection cross section, fine wire with AEH: max. 6 mm <sup>2</sup>		
Length of stripped insulation	12 mm		
<b>Output</b>			
Nominal voltage	DC 12 / 24 V		
Output current	max. DC 40 A		
Termination	screwless disconnect terminal		
Copper bus bar	3 x 10mm		
<b>General</b>			
Housing material	PA 6.6 (UL 94-V0; NFF I2, F2)		
Field installation	rail TS 35 (EN 50022)		
Protection class	IP 20		
Installation position	Optional		
Operation temperature range	-25 °C – 60 °C		
Storage temperature range	-40 – 85 °C		
Dimensions (w × h × d) in mm	10.0 × 119.4 × 63.7		
Weight (kg/piece)	0.035		
Approvals	cURus

Description	Part-No.	Type	PU	
Nominal voltage	DC 24 V	779000.2111	LCOS-CC-2K-1P-DC24V	1
<b>Input</b>				
Nominal voltage		DC 24 V		
Operation voltage range		DC 20.4 V – 28.8 V		
Rated current		DC 10 A		
Supply current		DC 32 A via LCOS power bus		
Reverse voltage protection		internal electronics		
<b>Control input (Set / Reset)</b>				
Signal level		DC 24 V (EN 61131)		
OFF		Pulse with falling edge >100 ms, <800 ms		
ON		Pulse with falling edge > 1 s		
Galvanic insulation I/O		2.5 kV, 50 Hz, 1 min.		
<b>Output</b>				
Switching element		MosFet		
Output current		max. DC 10 A		
Voltage drop		<170 mV (10 A)		
Status Indication		LED green: operating voltage ON, no fault, green flashing: 90 % $I_B$ red flashing: triggered, red: OFF		
Switch-on capacity		>10000 $\mu$ F		
Current range		1 A – 10 A (adjustable via switch in 1 A steps)		
Characteristic		fast (1), middle (2), slow 1 (3), slow 2 (4), slow 3 (5), adjustable via switch		
<b>Signal output</b>				
Switching element		Transistor in open collector version with Pull Up resistance		
Single channel message		(Status CH1, CH2) Acc. to IEC 61131-2: High level, no errors, low level, there are errors		
90 % of the rated current $I_B$		(Status 90 % CH1, CH2) Acc. to IEC 61131-2: High level <90 %, low level >90 %		
<b>Insulation voltage</b>				
centralised fault signalling		–		
(Status Out)		Single channel message 1+2, decoupled via diodes		
<b>General</b>				
Housing material		PA 6.6 (UL 94-V0; NFF I2, F2)		
Field installation		can be connected to LCOS function carrier 22.5 mm (accessories), DIN Rail mounting EN 60715		
Protection class		IP 20		
Installation position		Optional		
Vibration resistance		Vibration: EN 60068-2-6 Fc, Shock: EN 60068-2-27 Ea		
Climatic conditions		Acc. to EN 60721 Stationary use at weather protected locations		
Termination		X1: Load side: 8-pole measuring strip, CS 5,08 X2: Control side: 12-pole measuring strip, CS 3,5		
Operation temperature range		0 °C – 55 °C		
Storage temperature range		-40 – 70 °C		
Dimensions (w × h × d)		22.5 × 110.0 × 102.0 mm (including function carrier, without plug-in terminals on the side)		
Weight (kg/piece)		0.200		
Approvals		CE, in preparation: cULus

Dimensions (w × h × d) in mm	22.5 × 110.0 × 21.0		
Relative humidity	5 % – 95 % without condensing		
Weight (kg/piece)	0.023		
Approvals	cURus in preparation	cURus	
Loads from pollutants	According to IEC 60068-2-42, IEC 60068-2-43		
Insulation coordination	Acc. to EN 60664-1, EN 60947-1, EN 50178, EN 50124-1		
Length of entire node	1440 mm		
Shock resistance	15 g/11 ms acc. to IEC 60068-2-27 Ea		
Vibration resistance	1 g acc. to IEC 60068-2-6 Fc		

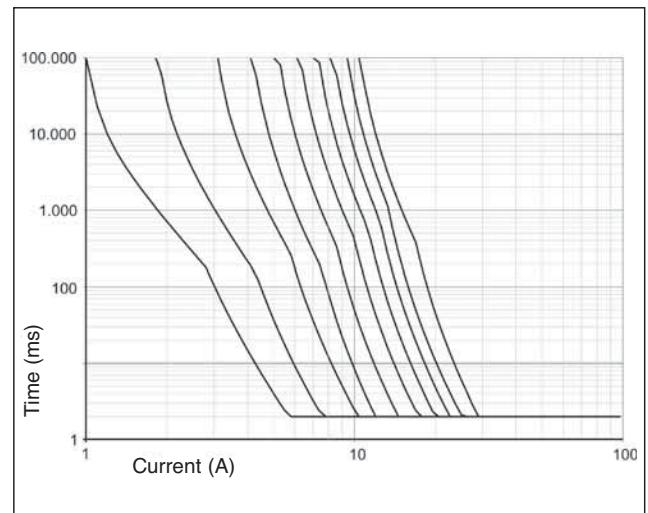

# LCOS-CC • Characteristic Curves

All device variants incorporate the same characteristics

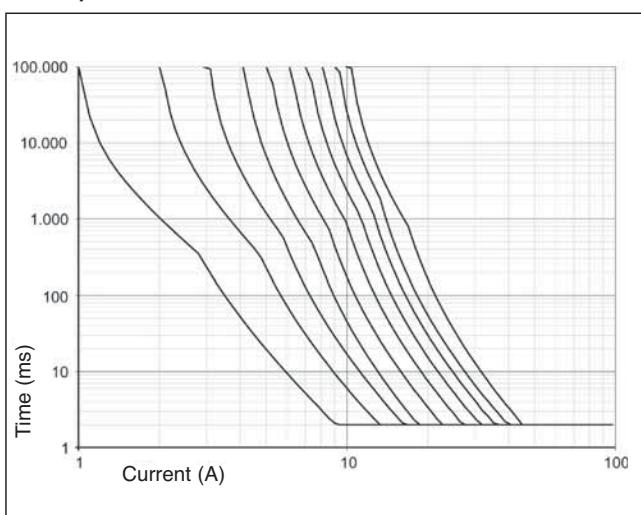

Switch position 1: Characteristic fast

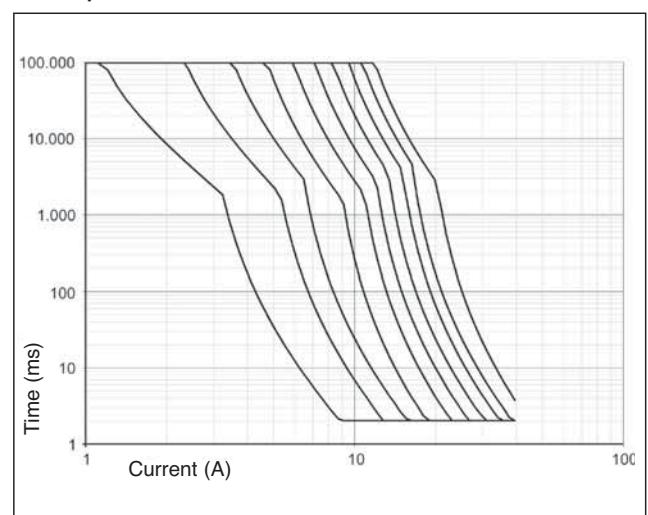

Switch position 2: Characteristic medium

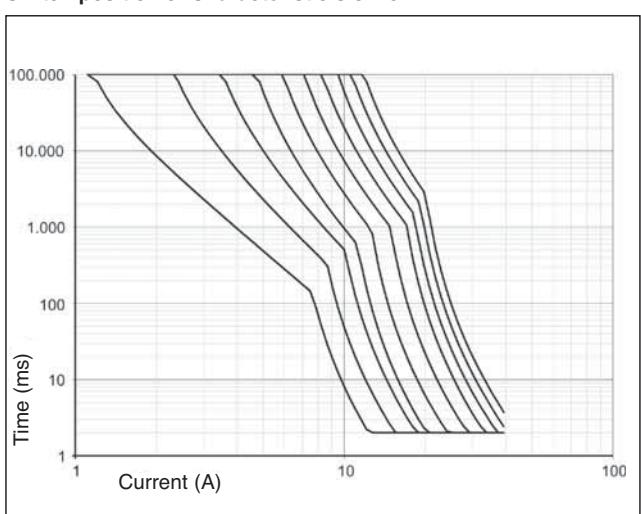

Switch position 3: Characteristic slow-1

Switch position 4: Characteristic slow-2

Switch position 5: Characteristic slow-3

# Load monitoring - Varioprint fuse module

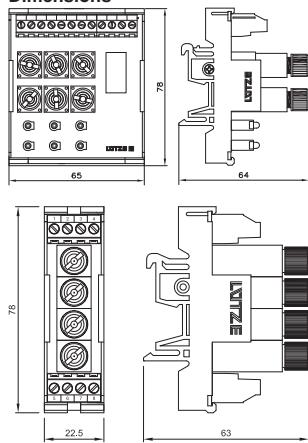

**AC/DC Load monitoring with fuse (5 × 20 mm)**

**Monitoring circuits 2.5 A und 6.3 A**

**Group signal using potential-free relay contact (only 716123)**

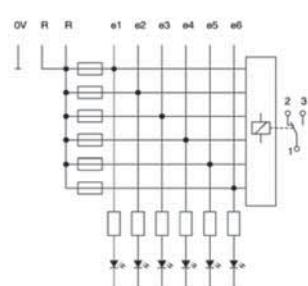

## Dimensions

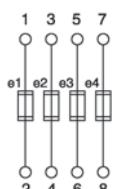

## PIN assignment

716123

710820

Description	Part-No.	Type	PU
<b>Load monitoring 6x2.5 A</b>			
Termination	716123	SIPE-6LED-6123 DC 24 V	1
<b>Load monitoring 4x6.3 A</b>			
Termination	710820	SIPE-4-0820 AC/DC 250 V	2
<b>Input</b>	<b>716123</b>	<b>710820</b>	
Nominal voltage	DC 24 V	AC/DC 230 V	
Input voltage range	16.8 – 30.0 V	0.0 – 250.0 V	
Rated current	6 × DC 2.5 A	4 × DC 6.3 A	
Fuse	Glass tube 5x20 mm, not included in delivery		
Resistor	<0.1 Ω		
Status Indication	–		
Rated insulation voltage (EN 50178)	150 V	300 V	
Pollution degree	2		
Overvoltage category	1		
<b>Signal circuit</b>			
Switching element	Relay	–	
Contact type	1 change over contact	–	
Min. switching voltage	AC/DC 17 V	–	
Max. switching voltage	AC/DC 250 V	–	
Min. switching current	AC/DC 0.10 mA	–	
Max. switching current	AC/DC 3 A	–	
Switch-on delay	8 ms	–	
Switch-off delay	8 ms	–	
Switching capacity	max. 1250 VA	–	
Contact material	AgNi	–	
Mechanical service life	2 × 10 <sup>7</sup> operations	–	
Rated insulation voltage (EN 40178)	250 V		
Clearance/creep. dist. (control/load side)	>2 mm	–	
<b>General</b>			
Form	Varioprint		
Protection class	IP 20		
Field installation	rail TS 35 (EN 50022)		
Insulation voltage input/output	–		
Safe isolation	–		
Operation temperature range	-20 – + 60 °C		
Storage temperature range	-25 – 80 °C		
Dimensions (w × h × d)	65.0 × 77.0 × 63.0 mm	22.5 × 77.0 × 63.0 mm	
Weight (kg/piece)	0.116	0.070	
Approvals	–		
Termination	Screw terminal: 0.25–2.5 mm <sup>2</sup>		
<b>Accessories</b>	<b>Article number</b>	<b>Description</b>	<b>PU</b>
Identification unit	710799		100

# Power supply - DC/DC converter

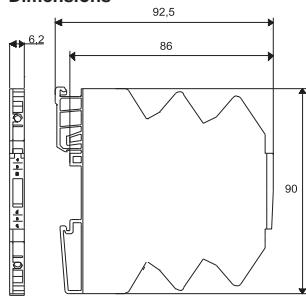

## DC/DC converter, 1-channel

**Input:** DC 24 V

**Output:** DC 24 V / 10 V / 9 V / 5 V

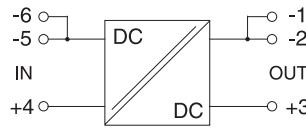

### Dimensions

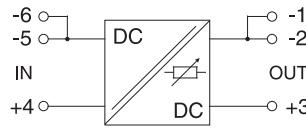

### PIN assignment

762185/762186

762184/762084, 762187/762188

Description	Part-No.	Type	PU				
<b>Screw terminal</b>							
Output voltage/current	DC 24 V, 30 mA	762185	CV 7-2185 DC24V/24V				
	DC 10 V, 100 mA	762184	CV 7-2184 DC24V/10V				
	DC 5 V, 150 mA	762187	CV 7-2187 DC 24V/05/09V				
<b>Spring terminal</b>							
Output voltage/current	DC 24 V, 30 mA	762186	CV 7-2186 DC24V/24V				
	DC 10 V, 100 mA	762084	CV 7-2084 DC24V/10V				
	DC 5 V, 150 mA	762188	CV 7-2188 DC 24V/05/09V				
<b>Input</b>	<b>762185/762186</b>	<b>762184/762084</b>	<b>762187/762188</b>				
Nominal voltage		DC 24 V					
Operation voltage range		DC 16.8–30 V					
Rated current	21.5 mA	14 mA	15 mA				
Inrush current		–					
Internal fuse		–					
External fuse		–					
Power Factor Correction P.F.C.		–					
Status Indication	–	LED					
Short-circuit current		<250 mA					
<b>Output</b>	<b>DC 24 V</b>	<b>DC 10 V</b>	<b>DC 5 V / 9 V</b>				
Rated voltage output	DC 24 V	DC 10 V	DC 5 V / 9 V				
Rated current output	30 mA	100 mA	100 mA / 100 mA				
Configuration	–	–	via DIP switch (see instruction leaflet)				
Max. output current		–					
Short-circuit current		<900 mA					
Voltage trim range	–	±1.0 V via potentiometer	±0.5 V / ±1.0 V via potentiometer				
Load regulation		<1 %					
Rise time	<20 ms	<10 ms					
Ripple & Noise	<20 mV <sub>eff</sub>	<10 mV <sub>eff</sub>					
Temperature coefficient		–					
Hold up time		–					
Parallel/redundant operation		No					
Low power loss		–					
Over voltage protection		–					
Overtemperature protection		–					
Short circuit characteristics		Current limit					
<b>General</b>							
Insulation voltage input/output	1.5 kV <sub>eff</sub>	0.5 kV <sub>eff</sub>	1.5 kV <sub>eff</sub>				
Rated insulation voltage (EN 50178)		50 V					
Derating		–					
Operation temperature range		-25 °C – 60 °C					
Storage temperature range		-40 °C – 85 °C					
M.T.B.F.		–					
Dimensions (w × h × d)		6.2 × 90.0 × 92.5 mm					
Cooling		Air convection					
Housing material		PA					
Field installation		can be snapped onto top-hat rail TS 35 (EN 60715)					
Application height		–					
Installation position		Optional					
Protection class		IP 20 (IEC 529, EN 60529)					
IP rating		–					
Overvoltage category		I					
Pollution degree		2					
Weight (kg/piece)		0.040					
Termination		Screw terminal: 0.14–1.5 mm <sup>2</sup>					
Approvals		–
